EXPERIMENT-2

2.(A). AIM: To perform bit masking and logical operations (AND, OR, XOR, nibble masking, and 1's and 2's complements) on 8-bit and 16-bit data using the 8085 microprocessor.

OUTPUT:

2(B). AIM: To perform bit setting, clearing, toggling, bit-status checking, shift and rotate operations, and count the number of 1s in an 8-bit number using the 8085 microprocessor, and perform a 16-bit left shift on the given word.
